

CLAIMS

We claim:

1. The electronic candle having a plastic body resembling the shape of a partially melted wax pillar candle with a somewhat flame-shaped tip, operating of the user-installed standard batteries, having a sliding on/off switch, and the said candle utilizes a micro-controller to provide a variety of glow or flicker light patterns emulating a wax candle flame.
2. The electronic battery-operated candle with the tip, which uses a micro-controller to facilitate a variety of glow or flicker light patterns emulating a wax candle flame.
3. The electronic battery-operated candle with the tip, having scent emitting substance added to the candle or to the candle holder.
